

## Intern, Postgrad, PhD Student, Post- Doc Biostatistics

700 ! The number of days we can get therapies faster to patients applying technology innovation.

### Your responsibilities:

- The internship will focus on the development and/or application of statistical methods in clinical research and development. Mathematical, statistical, graphical or programming techniques will be used for data analysis, simulation and display.
- This internship will provide motivated students with an exposure to pharmaceutical industry and with the opportunity to work in an exciting, multi-disciplinary and multi-cultural environment with senior-level biostatisticians.
- The intern will also be able to participate in a variety of educational opportunities within the biostatistics function of the Integrated Quantitative Sciences (IQS) department.
- The internship is expected to last approximately 3 months, or up to 6 months.

### What you'll bring to the role:

- The candidate should be familiar with common statistical methodology and be interested in its application in drug development.
- Good written and oral communication skills in English are required.
- Programming skills in a statistical programming language such as SAS or R are expected.
- The candidate should hold a Master's degree, PhD or equivalent in Mathematics, Statistics, or related subjects, and be enrolled in a PhD program.
